## SKILLS

**Technical:** SQL, Excel, Python (Pandas, NumPy, Matplotlib, Seaborn), Tableau, Claude, Github, Power BI

---

## EDUCATION

### Course Careers Data Analytics Certificate

Data Analytics

12/2024

### College of Staten Island (CUNY)

Bachelor of Arts in Sociology/Anthropology

06/2022

---

## WORK EXPERIENCE

### Data Analyst (Contract)

01/2026 - Present

#### Foundation For Essential Needs (FFEN)

- Cleaned and validated 5,000+ records across 8 food shelf locations in Excel, removing duplicates, correcting missing fields, and standardizing inconsistent formatting to prepare data for AWS integration.
- Standardized data formats for Second Harvest Heartland bulk sales tracking, improving regional food distribution reporting accuracy by an estimated 15%.
- Performed ongoing quality checks across 8 food shelf data sources, identifying and resolving 45+ data integrity issues that reduced reporting errors for the program director's AWS uploads.
- Created and maintained data cleaning documentation across 6 months of operations, reducing onboarding time for new data submissions and ensuring consistent formatting standards across all 8 locations.

### Fulfillment Operations Analyst

03/2022 - Present

#### Home Depot

- Tracked 35-50 daily BOPIS and delivery orders and compiled weekly Excel reports, identifying pickup delays and staging bottlenecks that improved on-time delivery performance by approximately 10%.
- Coordinated with inventory and front-end teams to track KPIs and resolve order discrepancies, resulting in more accurate order picking across a high-volume NYC store processing 150-200 daily transactions.
- Built and maintained weekly Excel reports for cross-functional stakeholders and store management, surfacing trends in fulfillment timing and customer pickup patterns that informed operational decisions and scheduling adjustments.

### Customer Service Associate

06/2020 - 08/2021

#### Rite Aid

- Communicated product discrepancies and stock issues to management, supporting data-driven inventory decisions that improved daily store operations.
- Coordinated across departments during high-volume shifts to streamline store operations, recognized by management for reliability and cross-functional collaboration.

---

## PROJECTS

### MPG Fuel Efficiency Analysis

Analyzed 398 vehicle records using Python (Pandas, Seaborn) to identify fuel economy trends across manufacturers. Found that vehicle weight was the strongest predictor of fuel efficiency, with heavier vehicles averaging up to 30% lower MPG.

### Art Trends In Global Museums

Used SQL (joins, subqueries, aggregations) to analyze collections across 50+ museums and 20+ art styles. Identified that Impressionism dominated holdings at major institutions like the Metropolitan Museum (244+ works), providing data that could inform acquisition strategy, exhibit planning, and audience targeting for underrepresented styles.
